Authors

Dr Brenda Boardman, MBE, FEI (contact author)

Brenda is head of the Lower Carbon Futures team and has been at the ECI since 1991. She is also Co-Director of the new UK Energy Research Centre (UKERC), launched in October 2004. Her main research focus is on energy efficiency and the fuel poor in terms of the economic, social and technical aspects, with a strong policy emphasis. She has been a member of the DTI's Energy Advisory Panel and is widely viewed as one of the most experienced in her field. She was awarded an MBE in 1998 for her work on energy issues.

Dr Sarah Darby

Sarah's main research interests are the social and behavioural aspects of energy use, especially as they relate to individual and social learning. She has worked on the evaluation of energy advice and audit programmes, the feasibility of electricity fuel mix disclosure, and on the impact of different forms of user feedback on energy consumption.

Graham Sinden

Graham has had a long involvement in the environment sector, working with organisations such as the Environment Protection Authority (Australia), United Nations High Commissioner for Refugees and Oxford University. His experience includes energy & environmental policy, environmental legislation, regulation & litigation, and field-based work. In addition to his research at the Environmental Change Institute, Graham collaborates with Cambridge University through the SuperGen project and with the Carbon Trust through the Marine Energy Challenge.

Dr Mark Hinnells

Mark has returned to the ECI after 6 years managing projects and providing policy advice to Government. Mark has a wide range of expertise in the use of energy in buildings, energy efficiency measures, as well as generation technologies, both in renewables and combined heat and power (CHP). He manages the Building Market Transformation programme. BMT, funded by Carbon Trust and the EPSRC, seeks to identify what policy actions are needed to reduce carbon emissions from the entire UK Building stock by 50% by 2030, given what we know of the technical options, energy markets, social trends, and impacts of climate change on energy use in buildings.

Dr Christian N Jardine

Christian is a researcher in the Lower Carbon Futures team and studies technologies and policies for greenhouse gas emission reductions. Primarily, his focus is on renewables, especially the use of solar photovoltaics within the household and on commercial buildings. His work covers the whole range of issues from technical monitoring through to social attitudes and policy and support measures.

Gavin Killip

Gavin's MSc thesis was on the prospects for sustainable energy use in English housing, addressing what is required to reduce carbon dioxide emissions from the domestic sector by 60% by 2050. He has worked for nine years in the voluntary and public sector on energy efficiency and renewable energy projects in urban areas. Gavin's research interests include the social and economic policy changes that are implicit in the climate change agenda.

Jane Palmer

Jane has worked at the ECI over various periods since 1995 on domestic energy efficiency and electricity disclosure. She has also managed community consultation processes on environmental policy both in the UK and Australia.

Contributors

Dr Kevin Lane

Kevin has contributed to over a dozen European energy end-use studies commissioned as preparation for EU product policy (eg labelling, minimum efficiency standards and voluntary agreements). During his 10-year spell at the ECI he created and developed the DECADE and CADENCE models that were used as the basis for DEFRA's Market Transformation Programme modelling. He helped develop the UK Domestic Carbon Model for the 40% House project and is now a Business Manager for AEA Technology plc, where he is undertaking a review of the UK's Climate Change Programme (as domestic sector expert) for DEFRA, and part of the knowledge management team of the Market Transformation Programme.

Sukumar Natarajan

Sukumar completed his MPhil in Environmental Design in Architecture from Cambridge in 2001. He coordinated a nationwide debate on sustainable development in the run-up to the Johannesburg summit, from the Centre for Science and Environment in New Delhi, and has been studying for a PhD on energy and carbon emissions in the housing sector at the Manchester Centre for Civil and Construction Engineering.

Professor Marcus Newborough

Marcus holds the ScottishPower/The Royal Academy of Engineering Research Chair in Energy & Environmental Engineering at Heriot-Watt University. His research interests have included micro-combined heat and power, renewable energy systems, smart heat exchangers, thermal depolymerisation and the design of energy-efficient buildings. While a professor in the Applied Energy Group at Cranfield University, he was awarded the John Hopkinson Premium by the Institution of Electrical Engineers for his work on demand-side energy management in the domestic sector.

Andrew Peacock

Andrew holds an MSc in Energy Systems and the Environment from the University of Strathclyde, where his thesis was on the alleviation of fuel poverty. His research interests include low-energy architecture, building-integrated renewables, dynamic insulation, building simulation and demand-side modelling and management.

Andrew Wright

Andrew has recently taken up a post as Senior Research Fellow at the Institute of Energy and Sustainable Development at De Montfort University, with particular interests in energy use in buildings, weather and climate change. His PhD investigated computer modelling of the thermal performance of industrial buildings. Andrew was Programme Manager of an MSc course in Sustainable Electrical Building Services at UMIST (now University of Manchester). He has worked for the UK Electricity Industry at EA Technology Ltd; Newcastle University; and the Building Design Partnership in Manchester. Andrew has been a member of the Chartered Institute of Building Services Engineers for many years, and was one of the authors of the recent guides on Environmental Design and Weather.
