

Climate resilience in African food systems

- How can Africa double its agricultural output by 2046?
- What's needed to unlock private sector participation?
- How can policy and regulatory environments enable change?
- Which technologies do you think hold the biggest promise?
- What do resilient and equitable food systems mean to you?

Our vision:

Resilient food systems and economic opportunities in agriculture to help end hunger and poverty in the next 20 years

We work in Ethiopia, Kenya, Nigeria, and Rwanda:

- Making food systems more sustainable and equitable
- Focusing on country-led initiatives and local priorities
- Unlocking investment and private sector participation
- Identifying and scaling key agricultural solutions
- Building an enabling policy and regulatory environment
- Empowering farmers to be growth generators in the economy
- Sowing the seeds for a prosperous future for African agriculture

Collaborate with us

This work, funded by the Gates Foundation, will be led by Dr Agnes Kalibata in a partnership between the University of Oxford and C4Impact Advisory Group with partners across four countries in Africa – Ethiopia, Kenya, Nigeria and Rwanda. Get in touch to learn how we can work together.
